DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-10, drawn to a method of calibrating a timer, classified in class 324, subclass 601.
- II. Claims 11-15, drawn to an apparatus having an event timer, classified in class 324, subclass 76.58.
- III. Claim 16-18, drawn to a PICA probe system, classified in class 382, subclass 141.

The inventions are distinct, each from the other because of the following reasons:

Inventions II and I are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the method of calibrating a timer as claimed can be practiced by another and materially different calibration apparatus, such as one that employs a counting device for measuring time intervals. Likewise the event timer apparatus as claimed can be used in a materially different calibration method, such as one that utilizes other than a voltage ramp signal.

Art Unit: 2858

Inventions III and I are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the method of calibrating a timer as claimed can be practiced by another and materially different PICA probe system, such as one that uses memory for image data collection storage.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

A telephone call was made to Bruce Ritter on May 21, 2003 to request an oral election to the above restriction requirement, but did not result in an election being made. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
